SATISH FULWANI

Staff Data Engineer | Data Science | 3x AWS Certified
MTech in Data Science and Engineering from BITS, Pilani

SUMMARY

Experienced and versatile **Staff Data Engineer** with 7+ years of delivering scalable, cloud-native data solutions across diverse industries, including **Media & Entertainment, Insurance**, and **Nutrition**. Proven expertise in architecting end-to-end data pipelines using **Azure Data Factory, Databricks, PySpark**, and AWS services such as **Glue, Lambda, S3**, and **DynamoDB**. Strong background in building **CI/CD** pipelines using the Cloud Python CDK and AWS Code Pipeline/Jenkins, and tackling challenging real-world data challenges, including requirement gathering, documentation, infrastructure setup, unit & integration testing.

In my most recent role, I led a team of **3 data engineers** to successfully modernize a legacy data platform by **migrating** it to Azure. I bring a strong understanding of, ETL/ELT workflows, and automation strategies that enable organizations to make **data-driven** decisions faster and with greater accuracy.

I'm passionate about driving engineering excellence, mentoring junior team members, and collaborating with cross-functional **stakeholders** to align data strategy with business goals.

TECHNICAL SKILLS

FRAMEWORKS
Spark, Databricks, Hadoop, NumPy, Pandas, Keras, SciPy

ML/DL TECHNIQUES
Convolutional Neural Networks, Random/Decision Forests, Logistic Regression

TOOLS & LANGUAGES
PySpark, Python, Amazon Web Services (AWS), Azure, Jenkins, SQL

DATABASES
RDMS(PostgreSQL), DynamoDB (NoSQL), Azure DB

CO-CURRICULAR

- Awarded **BRIGHTEST MIND** award by Nagarro.
- Won **2nd Prize** in Accenture AI Hackathon conducted in August,2019
- Twice received the **APEX Award** for Profitability and Delivery
- Developed Mail Automation System for Human Resource Team for sending bulk mail using Python

CERTIFICATIONS

- GCP Certified **Cloud Digital Leader** | GCP, DEC'22
- AWS Certified **Machine Learning- Speciality** | AWS, Mar'20
- AWS Certified **Cloud Practitioner** | AWS, Mar'20
- AWS Certified **Developer- Associate** | AWS, Sep'19
- **Machine Learning Advanced** Nanodegree | Udacity, Jan '19
- **Machine Learning Foundation** Nanodegree | Udacity, Apr '18

EDUCATION

BITS PILANI
APR'21-APR'23
PILANI, RJ

MTECH DATA SCIENCE & ENGINEERING
BITS, PILANI
CGPI – 7.18/10

MUMBAI UNIVERSITY
JUN'14-JUN'18
MUMBAI, MH

B.E. COMPUTER SCIENCE
VESIT, MUMBAI
CGPI – 7.19/10

MAHARSHTRA STATE BOARD
JUN'12-JUN'14
AKOLA, MH

Higher Secondary School (10+2)
MAHERBANU COLLEGE, AKOLA
PERCENTAGE – 78.15%

PROFESSIONAL EXPERIENCE

Role: STAFF DATA ENGINEER
Feb'23-Present
Pune, IN

Company: NAGARRO INDIA PVT LTD

Industry: Asia's Largest Insurance Company

Project: End-to-End Data Pipeline Implementation in Azure Cloud

Technologies: Azure Databricks, Spark (PySpark), Python, Azure Data Factory, Azure Synapse, Azure Storage, SQL Server

Led a key project to modernize and migrate legacy data pipelines to **Azure Cloud**. This project aimed to improve processing efficiency and scalability by designing new **ETL/ELT workflows** using **Azure Data Factory** for orchestration and **Databricks** for ETL operations. The migration enabled near real-time data analytics and better decision-making for the business.

Key Achievements:

- Migrated over **1TB** of legacy data to **Azure SQL DB** with zero downtime.
- Assisted the business consumers in obtaining historical data insights, which enables them to generate revenue from older customers.
- Developed data pipelines to support business intelligence and also the **framework** which could be used for similar migrations in future.
- Enhanced pipeline reliability, allowing for future scalability.

Role: DATA ENGINEER CONSULTANT
Aug'21-Feb'23
Mumbai, IN

Company: DELOITTE ILLP

Industry: Dutch Nutrition Company

Project: Solving Complex Big Data Issues Based on Business Needs

Technologies: Spark (PySpark), Python, AWS Glue, Hadoop, AWS S3, Microsoft Dynamics (CRM)

As a Data Engineer, I tackled complex big data challenges by aligning data engineering solutions with evolving business requirements. Partnered with cross-functional teams to diagnose and resolve data quality issues, optimize processing workflows, in large-scale data environments. Designed and implemented optimized, reliable, and cost-effective data solutions using **AWS Glue**, **AWS Athena**, **AWS S3**, and **AWS SageMaker** (For Notebooks).

Key Achievements:

- Executed ETL workflows on **AWS Data Lake** using AWS Glue, Crawlers, and Athena.
- Set up Hadoop sandbox environments with AWS Glue Dev Endpoints, SageMaker, and Hortonworks.
- Created data pipeline that sent data to different **machine learning models**.
- Enabled **near** real-time reporting, enhancing executive **decision-making**.

Role: BIG DATA ENGINEER
Oct'18– Aug'21
Bangalore, IN

Company: ACCENTURE PVT LTD

Industry: US based Media & Entertainment Client

Project: Implemented migration of static files to AWS S3, optimizing storage and delivery efficiency

Technologies: AWS EC2, AWS DynamoDB, AWS lambda, AWS SQS

Created, planned, and coordinated a highly effective and economical AWS migration architecture for ingesting and processing data from on-premise systems. committed to utilizing serverless technologies to create workflows that are scalable, fault-tolerant, and performance-optimized while maintaining data integrity.

Key Achievements:

- Developed serverless architecture using AWS Lambda, AWS SQS and other AWS services.
- Framework helped migrated **1.5 million assets** from an on-premises system to the cloud.
- Developed an automated tool to generate zip files up to **60GB** in size containing on-premises data and copy that data to Digital Asset Management (**DAM**) tool.
- The tool's **architecture** utilized the least number of dedicated AWS EC2 instances and the most amount of all other AWS Serverless Solutions, reducing the migration expense to $100.

PROJECT PORTFOLIO

FRUIT CLASSIFIER | DEEP LEARNING | APR'23

- Conducted an in-depth research project as part of a master's program, focusing on solving a real-world problem using data-driven techniques. Designed and implemented data pipelines, performed advanced data analysis, and built models aligned with academic and industry standards
- Fruit Classifier is a Machine Learning Model built using Convolutional Neural Network (**CNN**) and Deep Neural Network that **predicts** the fruit names in an image, inspired by the notion of "**Intelligent Farming.**"

SALES24| AWS & NODE.JS | OCT`19

- SALES24 is a proof-of-concept serverless website for selling and buying old goods.
- The technologies being used are AWS API Gateway, AWS Lambda, AWS DynamoDB & Amazon S3. The user authentication process is managed by an API Authoriser.

DOG BREED CLASSIFIER | MACHINE LEARNING | JUL`18

- Supported the deployment and training of cutting-edge CNN models using backpropagation and chain rule.
